

# Ensure resilience as you re-open, so you stay open

## COVID-19 Disruption

Companies are working to re-open their businesses. You need to understand the impact of COVID-19 on their suppliers and sub-tier suppliers. Identify which ones may be at risk. Should you be evaluating alternatives? How do you get to the new normal?

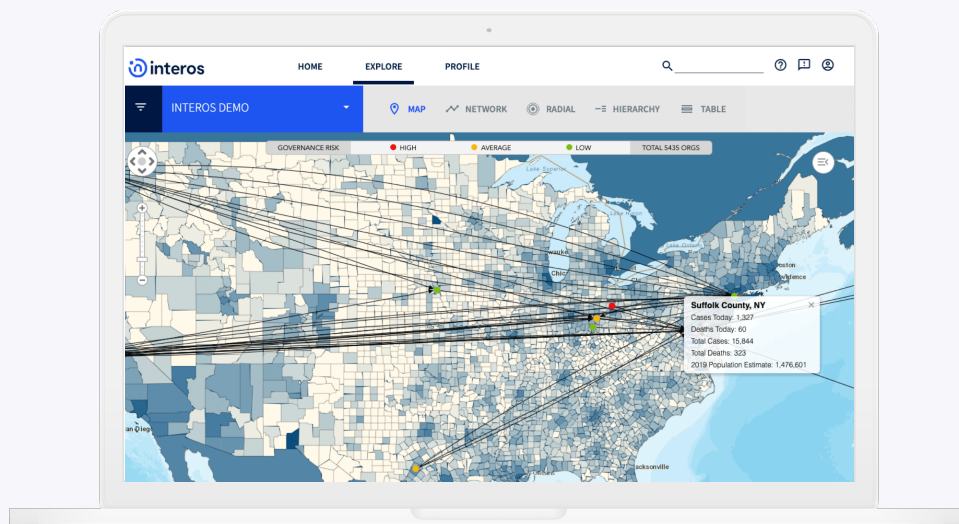

To ensure resilience as you re-open, so you stay open, you need to:

- Continuously evaluate and monitor your suppliers for bankruptcy, shutdowns, other business interruptions
- Alerts on financial issues, impaired operations caused by COVID-19 or any other impact event
- Identify and assess alternatives

## The Interos Solution

Interos is the first and only multi-tier, multi-factor third-party risk management solution protecting enterprise ecosystems from financial, operations, governance, geographic and cyber risk. Continuously.

With Interos companies can assess the impact of COVID-19 on the suppliers and sub-tier suppliers in their supply chain, get alerted to first signs of distress, and evaluate alternative suppliers.

## Key Benefits

### Understand impact of COVID-19 on suppliers throughout your extended supply chain

Use cases and trending data to track COVID-19 at the county and state level in the US and country level in the rest of the world

### No surveys – start instantly

Use cases and trending data to track COVID-19 at the county and state level in the US and country level in the rest of the world

### No more annual assessments, get continuous monitoring

Interos constantly updates key business data and alerts you when status changes

### Ensure business continuity

Prevent disruption from the ripple effects caused by COVID-19 impacting any supplier in your extended supply chain

### Prevent reputational harm

Identify businesses with poor ESG practices, employ unethical labor practices, and produce counterfeit products

### Comply with government regulations and corporate policies

Avoid doing business with companies in sanctioned countries or have violated data protections

### Eliminate concentration risk

Identify potential suppliers that play an oversized role in your extended supply chain

## Key features

- **Multi-tier**  
Identify the suppliers to your suppliers you didn't even know you relied on
- **Multi-factor Risk**  
Assess suppliers against 5 risk factors – financial, operations, governance, geographic, and cyber
- **Multi-facet Filtering**  
Evaluate risk by risk factors, country, industry, and tiers
- **Continuous Monitoring and Alerts**  
Update data continuously and get alerted when status changes
- **Supplier Profiles**  
Aggregated report of risk scores, relevant news, and key risk insights of your suppliers
- **Advanced Visualization**  
See your entire supply chain in an easy-to-use graphical Interface

## Unique underlying technology

Interos is built on top of the Interos Knowledge Graph (IKG), which is the world's largest business relationship graph repository. IKG automatically discovers suppliers and their supplier networks across the globe, maps business relationships across the entire ecosystem, and assesses each vendor against multiple risk factors.

Containing IKG ingests 250 million events each month from more than 85,000 feeds to create a repository of over 50 million companies. We continuously monitor 2 million of these companies to identify business relationships between entities.

IKG uses machine learning and natural language processing to analyze both structured and unstructured data from publicly available sources as well as from our strategic data alliances to detect entities and infer relationships. And all of this is done automatically and continuously.

## About Interos

Interos protects customers' brand and operations from risk in their extended supply chains and business relationships. The first AI-powered platform for eliminating multi-party, multi-factor risk from 3rd, 4th to nth tier parties, Interos automates discovery, detection, and response to financial, operations, governance, geographic, and cyber risk. Designed by experts and leveraging the company's 15 years of experience in managing the world's most complicated supply chains, Interos provides real-time risk management for the largest commercial brands in manufacturing, financial services, and aerospace and defense.
