responsiveness into your supply chain**

Proactively build adaptability and responsiveness into your supply chain

CEOs, Chief Risk Officers, and supply chain executives are aware, now more than ever, that supply chain problems can quickly ripple across the globe. To survive and thrive during disruptive events, businesses need visibility into their entire supplier network and down to the Nth tier as well as an understanding of the risks to business continuity those relationships pose.

Jennifer Bisceglie

Founder and CEO,
Interos

From the article:

[“In supply chain management, the best defense is a good offense Interos”](#)

With the use of artificial intelligence, it is more possible today than ever to map every node in your supply chain and identify new external conditions – weather, geopolitical conflict, labor and economic trends -- that could result in increased vulnerability to attacks.

Conventional approaches to building resilience are clearly limited. Suppliers surveys and traditional risk assessments only account for the third parties you know about, not the 4th to Nth parties your suppliers depend upon. These solutions are costly, provide only point-in-time visibility, and fail to account for the ripple effects of rapidly changing geopolitical events, natural disasters, and pandemics. There have always been good reasons to do more to protect supply chains against disruption than most organizations currently do. However, the Coronavirus pandemic should turn ongoing discussions into concrete actions.

Move from reacting to preventing disruption

Only Interos gives you in-depth multi-tier, multi-factor due diligence assessment needed to evaluate the resiliency of your entire ecosystem. Our third-party risk management solution allows you to identify suppliers down to the Nth tier, uncover relationships, and assess the risk of each supplier.

With Interos, you can model the ripple effect of events of your 3th- to Nth-tier suppliers on your supply chain. Use Interos to better understand these risks, such as natural disasters, political unrest, epidemics, and cyber attacks, among others, before they impact your business operations so you can prevent disruption, eliminate concentration risk, and ensure business continuity.

Need to Build Better Resilience into Your Supply Chain?

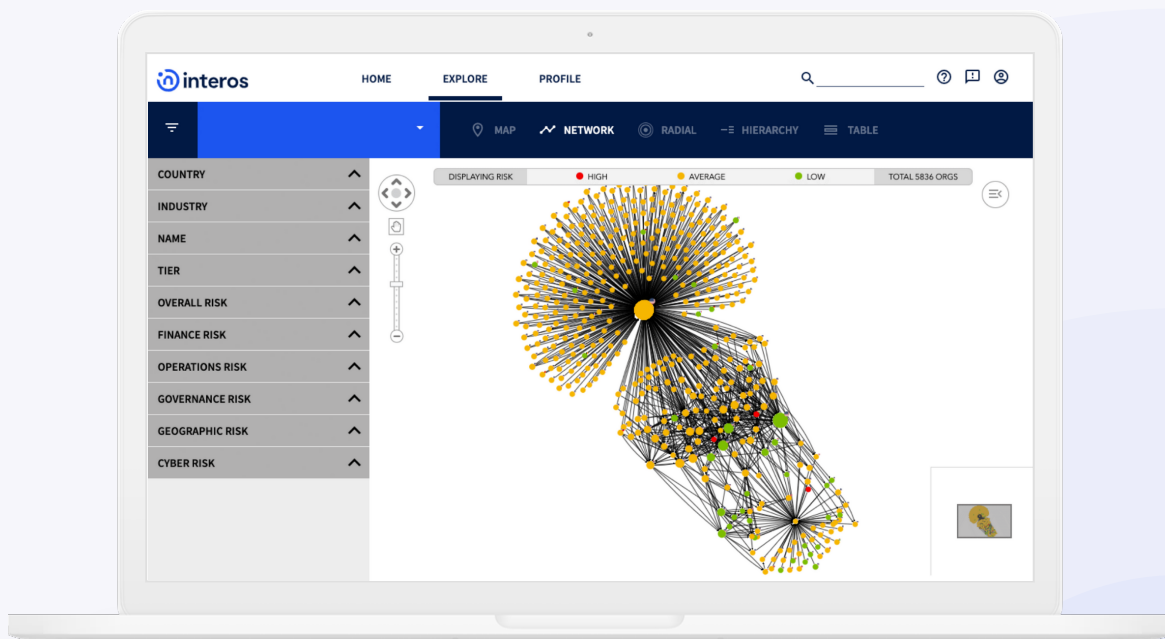

Get Interos to:

- Get visibility into what companies you're connected to and the risks they pose
- Identify all types of risk in your extended supply chain
- Ensure operational/business continuity by staying ahead of issues
- Understand if you are connected to suppliers with cybersecurity issues
- Discover over-reliance on a single supplier or resource
- Mitigate geographic concentration risk
- Find out how financially resilient your suppliers are
- Make sure delivery of material supplies are not interrupted

First Multi-tier, Multi-factor, Third-party Risk Management Solution

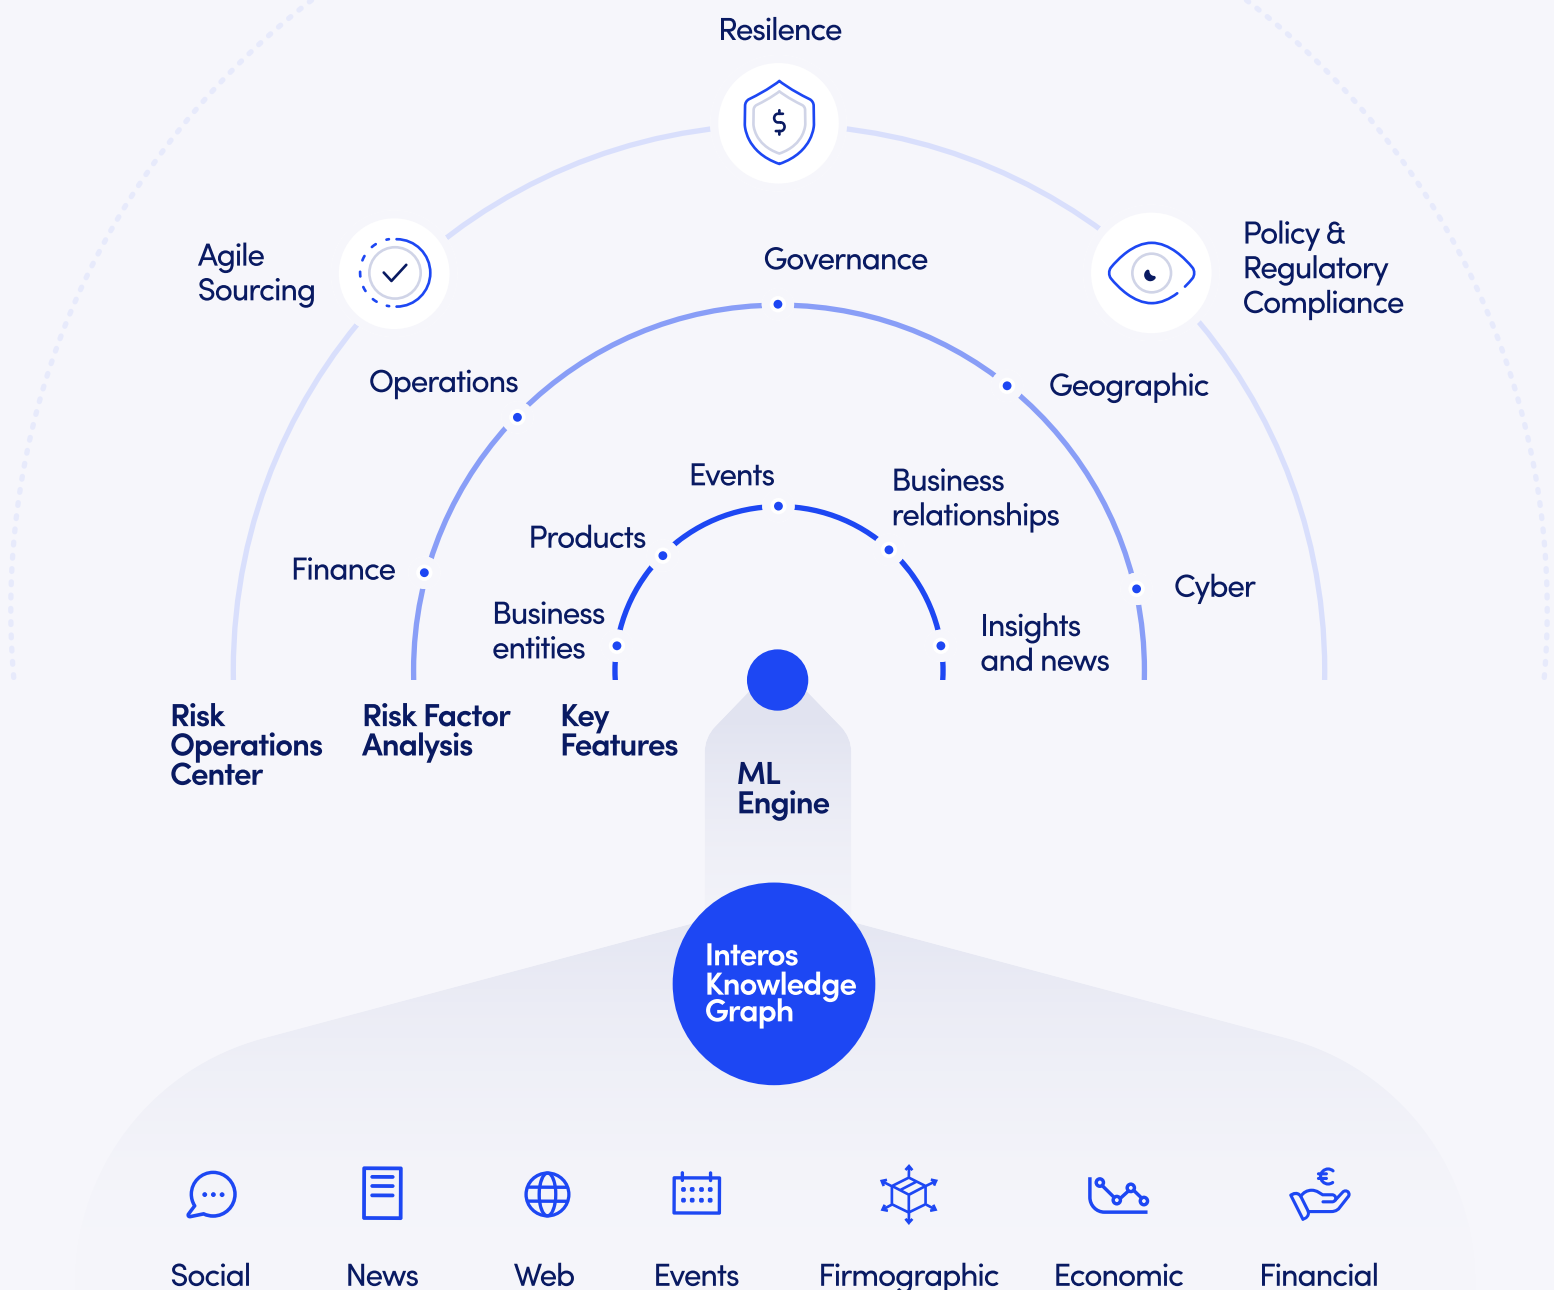

Interos is the first and only multi-tier, multi-factor, third-party risk management solution that allows you to perform deeper due diligence at scale. The solution allows you to see all the suppliers in your ecosystem down to the nth tier and identifies potential risks that could impact your business operations and brand reputation. The solution continuously monitors financial, operational, governance, geographic, and cyber risk in your extended supply chain and provides actionable insights so you can limit business interruption, avoid compliance issues, eliminate concentration risk, and prevent potential harm to your brand.

The solution includes the Interos Knowledge Graph (IKG) which is the world's largest business relationship graph repository. IKG automatically discovers suppliers and their supplier networks across the globe, maps business relationships across the entire ecosystem, and assesses each vendor against multiple risk factors. This helps CEOs, Chief Risk Officers, and supply chain professionals to ensure resilient supply chains that experience minimal business disruption.

How the Interos works

IKG ingests 250 million events each month from more than 85,000 feeds to create a repository of over 100 million companies. We continuously monitor 2 million of these companies to identify business relationships between entities. IKG uses machine learning and natural language processing to analyze both structured and unstructured data from publicly available sources as well as from our strategic data alliances to detect entities and infer relationships. And all of this is done automatically and continuously.

About Interos

Interos protects customers' brand and operations from risk in their extended supply chains and business relationships. The first AI-powered platform for eliminating multi-party, multi-factor risk from 3rd, 4th to nth tier parties, Interos automates discovery, detection, and response to financial, ethical, geographic, cyber and relationship risk.

Designed by experts and leveraging the company's 15 years of experience in managing the world's most complicated supply chains, Interos provides real-time risk management for the largest commercial brands in manufacturing, financial services, and aerospace and defense.
