

Identify and Proactively Manage Risk with Coupa and Interos

Manage supplier risk with multi-tier and multi-factor risk scores through the Interos embedded app and Coupa Connector

The Interos embedded app and Coupa Connector deliver instant visibility into continuously updated supplier risk scores within Coupa. This allows users to evaluate new suppliers, review existing suppliers, and monitor supplier networks for potential risks and disruptions.

Key Features

The Interos embedded app offers Coupa users ongoing monitoring capabilities with i-Score TM , which provides up-to-date risk levels. i-Score incorporates several factors for suppliers in your network.

Users are equipped to make better supplier decisions with broader insight into financial, operational, ESG, geopolitical, restrictions, and cyber risks from the Interos Operational Resilience Cloud.

With an updated supplier risk score customers can use this data and intelligence to control transactions, prevent users from submitting a requisition, add approvers into a workflow, or warn users of risky suppliers they may engage with.

Users can manage suppliers by exception, knowing where to gather more information from the supplier category leader or purchasing agent, to determine the risk impact and potential mitigation activities. All this can be done while continuously monitoring all suppliers.

Supplier Visibility: Together, Coupa and Interos drastically improve the ability for customers to evaluate and monitor supplier risk, make better sourcing decisions, or select suppliers to do business through visibility of first- and sub-tier supplier network risk intelligence. Pricing and performance can be merged with quality information to build a complete view of risk.

Proactive Management of Suppliers:

Low rating (e.g. ESG rating) kicks off a performance review allowing for users to improve business relationships.

With Interos, Coupa can alert users immediately if a threshold has been met. If the financial risk drops, alerts are issued. A change in data can trigger a workflow to react. Users are equipped with the knowledge needed to create their own view of supplier risk and maintain working relationships with suppliers who pose the least level of risk to their organization.

Manage Everyday Processes: Interos integrates into Coupa's supplier management module (SMM). The SMM is the supplier repository within the e-procurement offering. Users gain better insight in transacting with suppliers and sending purchase orders. Users can manage their multi-supplier environment to avoid disruption and ensure continuity.

Ongoing Supplier Management: Users can continuously monitor suppliers with current data automatically fed into Coupa. Customers will be alerted if an incident occurs. Coupa then connects supplier order data. The user can determine performance, delivery times, quality, invoicing accuracy, cost, and item inventory. All these functions are tracked in Coupa, which elicits a performance score.

Integration Summary

- One centralized experience for supplier risk management
- Detect recent score changes or high-risk organizations easily within the Interos and Coupa dashboard
- Initiate decisions and tasks based on Interos risk score updates in Coupa's leading workflow engine
- Integration into GRC and corporate responsibility categories
- Available via the <u>Coupa App</u>
 <u>Marketplace GRC</u> and Corporate

 Responsibility categories
- No lengthy implementations or additional software is needed

Benefits

Uncover Hidden Risks

Gain a single, simple view of supplier risk scores across multiple factors that could lead to supply disruptions, performance issues, regulatory non-compliance, or reputational harm. Proactively monitor supplier risk to improve decision-making and operational resilience.

Detailed Insights into Risk

Quickly access the supplier's entire risk profile within the Interos Operational Resilience Cloud, including the specific attributes that make up each risk score across multiple risk factors for your suppliers.

Make Better Decisions

Gain a quick view into supplier risk scores from Coupa and Interos within Risk Aware while reviewing overall supplier health. Users are able to holistically view of the supplier's risk and performance when determining mitigation steps.

Identify Sub-tier Supplier Risks

Interos automatically maps sub-tier supplier relationships to the N^{th} tier, enabling you to visualize your suppliers' suppliers and their risk profiles across your extended supply network. Users gain deeper insights into potential upstream risks.

About Interos

Interos is the operational resilience company — reinventing how companies manage their supply chains and business relationships — through our breakthrough SaaS platform that uses artificial intelligence to model and transform the ecosystems of complex businesses into a living global map, down to any single supplier, anywhere.
