

Take a Proactive Approach to Supplier Risk Management

Anticipate Supplier Risk Events and Supply Disruptions with Continuous Monitoring of Supplier Risk

Your business is under constant threat of supply chain disruptions. Cyber attacks, geopolitical conflicts, severe weather events, labor shortages, and financial and inflationary pressures are disrupting business operations globally, leading to production slowdowns, service interruptions, lost revenue, and higher costs.

At the same time, there is a growing focus on corporate social responsibility, headlined by environmental stewardship and human rights. This poses another set of risks, reaching across the extended supplier network to sub-tier suppliers that are multiple connections away from your business. A single instance of lax workplace safety, unethical labor practices, or an environmental catastrophe could impact your brand reputation amongst customers, partners and investors, and even put you at risk of non-compliance with a growing list of regulatory and global trade controls.

Traditional methods of managing risk across extended supply networks have been limited due to the upside-down math of too many suppliers and not enough resources or time. Focusing on sub-sets of suppliers that are most critical to operations provides only a partial, point-in-time view of supply risk. Too many suppliers remain unmonitored and visibility into sub-tier supplier relationships is lacking, resulting in hidden risks that are only recognized once a disruption has happened.

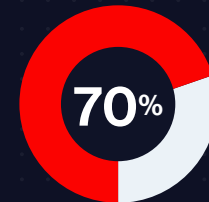

From Reactive to Proactive

Comprehensive visibility into your extended supply networks, down to the Nth tier supplier, enables procurement teams to proactively monitor and manage supplier and supply chain risk at scale. An early warning system enables procurement and supplier risk management teams to stay informed of changing risk profiles and anticipate potential disruption events before the impact is felt, with longer lead times to adjust and mitigate the risk to their businesses.

The Interos Operational Resilience Cloud delivers a continuous monitoring solution that improves your operational resilience to supply chain risks and disruptions at all tiers of your supply chain, including multi-factor risk assessments and monitoring for all suppliers. Instantly assess the risk across your entire supply chain, individual suppliers, and sub-tier suppliers, with automatic alerts of developments that could impact your business and how the ripple effects could cause disruption to your business.

See Everything. Do Anything.™

Supply Chains Under Attack

More than **70%** of organizations experienced a supply chain disruption in 2021

86% reported a direct loss of revenue

83% reported damage to their brand reputation

33% of those disruptions were traced to sub-tier suppliers

57% reported they could have reduced the impact with more advanced notice

Map Your Supply Chain and Supplier Relationships: Interos automatically maps your extended supply networks to deliver a global map of your suppliers and sub-tier suppliers to the Nth tier. Consisting of more than 345 million entities and 14 billion business relationships, Interos provides you with an instant, comprehensive view of your extended supplier network.

Expand Risk Assessments Across Multiple Factors: Interos uses artificial intelligence to collect, assess, score and monitor suppliers and entities across six key risk indicators, each with multiple subfactors and attributes to determine extensive risk profiles. Financial, Operational, ESG, Geopolitical, Restrictions and Cyber risk scores are calculated and displayed individually, as well as an overall i-Score for each supplier and sub-tier supplier in your network.

Cast a Wider Net for Risk Information: Interos leverages thousands of data sources from commercial data providers and public sources to feed our proprietary risk scoring algorithms to deliver comprehensive, up to date risk assessments. Overlapping data points and validated information produce a more thorough and unbiased source of risk data than supplier self-reported data and internal scorecards.

Continuous Monitoring and Automated Alerting: New, updated data is automatically adopted into supplier risk profiles and score adjustments are pushed to you in real-time, keeping you up to date on changes to supplier risk indicators. Notifications and alerts can be configured to your risk appetites for different types of suppliers, so that you receive early warning of changing risk postures or disruptive events that matter to your business.

Interos can help you become more proactive in managing risk by providing comprehensive visibility of multi-factor risk across your extended supply network. Instead of focusing on arbitrarily prioritized suppliers for periodic reviews and risk assessments, identify your top at-risk suppliers for proactive mitigation activities before a disruption impacts your business. Leverage deeper insights, be alerted to the first signs of distress, and gain longer lead times for risk avoidance and management.
